PROFILE SUMMARY

AI/ML Engineer specializing in **Generative AI, NLP, Machine Learning, and Healthcare AI systems**. Experienced in building **LLM-powered applications, scalable ML pipelines, and production-ready AI solutions** using Python, FastAPI, React, and modern AI frameworks.

EDUCATION

B.E. Computer Science & Engineering (Hons – AI & ML)

Chandigarh University, Punjab

May 2026(Expected)

GPA: 8.56(Current)

EXPERIENCE

Machine Learning Intern – Future Interns(Remote)

Jun 2025 – Jul 2025

- Engineered a **Customer Churn Prediction System** using Scikit-learn, Pandas, and feature engineering.
- Developed a **Streamlit dashboard** for real-time prediction and AI-driven business insights.
- Integrated OpenRouter API and optimized preprocessing pipelines for scalable inference workflows.

PROJECTS

AI Interview Screener (LLM-Powered Platform)

2026

Python, FastAPI, React, Groq API, NLP, Docker

- Architected a full-stack AI interview platform supporting **Practice** and **Real Interview** modes.
- Integrated LLM-based evaluation pipelines to assess communication, confidence, and clarity.
- Designed scalable **React + FastAPI** architecture with voice/text interaction and metric-driven scoring.

Hybrid CCDA to FHIR Converter (Healthcare AI)

2025

Python, XML, NLP, SciSpacy, FHIR

- Engineered an NLP-assisted healthcare interoperability pipeline converting CCDA into WHO-compliant FHIR resources.
- Implemented **SNOMED CT** and **LOINC** ontology mapping, improving semantic accuracy by **90%**.
- Developed modular parsers for Medications, Allergies, Conditions, and Vital Signs conversion.

Multipurpose AI Chatbot Platform

2025

Python, Streamlit, LangChain, OpenRouter

- Developed a multi-persona Generative AI chatbot with contextual memory and role-based prompting.
- Designed scalable architecture enabling integration of AI tools and intelligent automation workflows.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, C/C++, SQL

AI/ML: TensorFlow, PyTorch, Scikit-learn, NLP, Generative AI, LLMs, YOLO

Frameworks: FastAPI, Flask, Django, Streamlit, React, REST APIs

Databases: PostgreSQL, MySQL, MongoDB

Tools: Docker, Git, GitHub Actions, Railway, Postman, VS Code

Core Concepts: DSA, OOP, CI/CD, Model Deployment, System Design

RESEARCH & PUBLICATIONS

Enhancing CCDA to FHIR Conversion with NLP and Ontological Normalization

International Conference on Computing, Communication, Network Systems & Security(IC2NS2), 2026

- Proposed an NLP-driven framework to improve healthcare interoperability and semantic clinical mapping.
